# Filter Recipes

The Filter classes are in the [geoscript.filter](#) package.

## Creating Filters

*Create a Filter from a CQL string*

```
Filter filter = new Filter("name='Seattle'")
println filter.toString()
```

```
[ name = Seattle ]
```

*Create a Filter from a CQL string*

```
Filter filter = new Filter
("<filter><PropertyIsEqualTo><PropertyName>soilType</PropertyName><Literal>Mollisol</L
iteral></PropertyIsEqualTo></filter>")
println filter.toString()
```

```
[ soilType = Mollisol ]
```

*Create a pass Filter that return true for everything*

```
Filter filter = Filter.PASS
println filter.toString()
```

```
Filter.INCLUDE
```

*Create a fail Filter that return false for everything*

```
Filter filter = Filter.FAIL
println filter.toString()
```

```
Filter.EXCLUDE
```

*Create a spatial bounding box Filter from a Bounds*

```
Filter filter = Filter.bbox(new Bounds(-102, 43.5, -100, 47.5))
println filter.toString()
```

```
[ the_geom bbox ReferencedEnvelope[-102.0 : -100.0, 43.5 : 47.5] ]
```

*Create a spatial contains Filter from a Geometry*

```
Filter filter = Filter.contains(Geometry.fromWKT("POLYGON ((-104 45, -95 45, -95 50, -104 50, -104 45))"))  
println filter.toString()
```

```
[ the_geom contains POLYGON ((-104 45, -95 45, -95 50, -104 50, -104 45)) ]
```

*Create a spatial distance within Filter from a Geometry and a distance*

```
Filter filter = Filter.dwithin("the_geom", Geometry.fromWKT("POINT (-100 47)"), 10.2, "feet")  
println filter.toString()
```

```
[ the_geom dwithin POINT (-100 47), distance: 10.2 ]
```

*Create a spatial crosses Filter from a Geometry*

```
Filter filter = Filter.crosses("the_geom", Geometry.fromWKT("LINESTRING (-104 45, -95 45)"))  
println filter.toString()
```

```
[ the_geom crosses LINESTRING (-104 45, -95 45) ]
```

*Create a spatial intersects Filter from a Geometry*

```
Filter filter = Filter.intersects(Geometry.fromWKT("POLYGON ((-104 45, -95 45, -95 50, -104 50, -104 45))"))  
println filter.toString()
```

```
[ the_geom intersects POLYGON ((-104 45, -95 45, -95 50, -104 50, -104 45)) ]
```

*Create a feature id Filter*

```
Filter filter = Filter.id("points.1")  
println filter.toString()
```

```
[ points.1 ]
```

### Create a feature ids Filter

```
Filter filter = Filter.ids(["points.1","points.2","points.3"])
println filter.toString()
```

```
[ points.1, points.2, points.3 ]
```

### Create an equals Filter

```
Filter filter = Filter.equals("name", "Washington")
println filter.toString()
```

```
[ name = Washington ]
```

## Using Filters

### Get a CQL string from a Filter

```
Filter filter = new Filter("name='Seattle'")
String cql = filter.cql
println cql
```

```
name = 'Seattle'
```

### Get an XML string from a Filter

```
String xml = filter.xml
println xml
```

```
<ogc:Filter xmlns:xs="http://www.w3.org/2001/XMLSchema"
xmlns:gml="http://www.opengis.net/gml" xmlns:ogc="http://www.opengis.net/ogc">
<ogc:PropertyIsEqualTo>
<ogc:PropertyName>name</ogc:PropertyName>
<ogc:Literal>Seattle</ogc:Literal>
</ogc:PropertyIsEqualTo>
</ogc:Filter>
```

### *Combine Filters with and*

```
Filter cityFilter = new Filter("city = 'Seattle'")
Filter stateFilter = new Filter("state = 'WA'")
Filter andFilter = cityFilter.and(stateFilter)
println andFilter
```

```
[[ city = Seattle ] AND [ state = WA ]]
```

### *Combine Filters with and using the plus operator*

```
Filter cityFilter = new Filter("city = 'Seattle'")
Filter stateFilter = new Filter("state = 'WA'")
Filter andFilter = cityFilter + stateFilter
println andFilter
```

```
[[ city = Seattle ] AND [ state = WA ]]
```

### *Combine Filters with or*

```
Filter seattleFilter = new Filter("city = 'Seattle'")
Filter tacomaFilter = new Filter("city = 'Tacoma'")
Filter orFilter = seattleFilter.or(tacomaFilter)
println orFilter
```

```
[[ city = Seattle ] OR [ city = Tacoma ]]
```

### *Negate a Filter*

```
Filter seattleFilter = new Filter("city = 'Seattle'")
Filter notSeattleFilter = seattleFilter.not
println notSeattleFilter
```

```
[ NOT [ city = Seattle ] ]
```

### *Negate a Filter using the minus operator*

```
Filter seattleFilter = new Filter("city = 'Seattle'")
Filter notSeattleFilter = -seattleFilter
println notSeattleFilter
```

```
[ NOT [ city = Seattle ] ]
```

### *Simplify a Filter*

```
Filter seattleFilter = new Filter("city = 'Seattle'")
Filter filter = (seattleFilter + Filter.PASS).simplify()
println filter
```

```
[ city = Seattle ]
```

## Evaluating Filters

### *Test to see if a Filter matches a Feature by attribute*

```
Feature feature = new Feature([
    id: 1,
    name: "Seattle",
    geom: new Point(-122.3204, 47.6024)
], "city.1")

Filter isNameFilter = new Filter("name='Seattle'")
boolean isName = isNameFilter.evaluate(feature)
println isName
```

```
true
```

```
Filter isNotNameFilter = new Filter("name='Tacoma'")
boolean isNotName = isNotNameFilter.evaluate(feature)
println isNotName
```

```
false
```

### *Test to see if a Filter matches a Feature by feature id*

```
Filter isIdFilter = Filter.id("city.1")
boolean isId = isIdFilter.evaluate(feature)
println isId
```

```
true
```

```
Filter isNotIdFilter = Filter.id("city.2")
boolean isNotId = isNotIdFilter.evaluate(feature)
println isNotId
```

false

*Test to see if a Filter matches a Feature by a spatial bounding box*

```
Filter isInBboxFilter = Filter.bbox("geom", new Bounds(-132.539, 42.811, -111.796,
52.268))
boolean isInBbox = isInBboxFilter.evaluate(feature)
println isInBbox
```

true

```
Filter isNotInBboxFilter = Filter.bbox("geom", new Bounds(-12.656, 18.979, 5.273,
34.597))
boolean isNotInBbox = isNotInBboxFilter.evaluate(feature)
println isNotInBbox
```

false

## Creating Literals

*Create a literal Expression from a number*

```
Expression expression = new Expression(3.56)
println expression
```

3.56

*Create a literal Expression from a string*

```
Expression expression = new Expression("Seattle")
println expression
```

Seattle

*Evaluating a literal Expression just gives you the value*

```
Expression expression = new Expression(3.56)
double number = expression.evaluate()
println number
```

3.56

## Creating Properties

*Create a Property from a string*

```
Property property = new Property("name")
println property
```

name

*Create a Property from a Field*

```
Field field = new Field("geom", "Polygon")
Property property = new Property(field)
println property
```

geom

## Evaluating Properties

*Evaluate a Property to get values from a Feature. Get the id*

```
Feature feature = new Feature([
  id: 1,
  name: "Seattle",
  geom: new Point(-122.3204, 47.6024)
], "city.1")

Property idProperty = new Property("id")
int id = idProperty.evaluate(feature)
println id
```

1

*Get the name*

```
Property nameProperty = new Property("name")
String name = nameProperty.evaluate(feature)
println name
```

Seattle

*Get the geometry*

```
Property geomProperty = new Property("geom")
Geometry geometry = geomProperty.evaluate(feature)
println geometry
```

POINT (-122.3204 47.6024)

## Creating Functions

*Create a Function from a CQL string*

```
Function function = new Function("centroid(the_geom)")
println function
```

centroid([the\_geom])

*Create a Function from a name and Expressions*

```
Function function = new Function("centroid", new Property("the_geom"))
println function
```

centroid([the\_geom])

*Create a Function from a name, a Closure, and Expressions*

```
Function function = new Function("my_centroid", {g-> g.centroid}, new Property
("the_geom"))
println function
```

my\_centroid([the\_geom])

### Create a Function from a CQL string and a Closure

```
Function function = new Function("my_centroid(the_geom)", {g-> g.centroid})
println function
```

```
my_centroid([the_geom])
```

### You can get a list of built in Functions

```
List<String> functionNames = Function.getFunctionNames()
println "There are ${functionNames.size()} Functions:"
functionNames.sort().subList(0,10).each { String name ->
    println name
}
```

There are 307 Functions:

- Area
- Categorize
- Collection\_Average
- Collection\_Bounds
- Collection\_Count
- Collection\_Max
- Collection\_Median
- Collection\_Min
- Collection\_Nearest
- Collection\_Sum

## Evaluating Functions

### Evaluate a geometry Function

```
Feature feature = new Feature([
    id: 1,
    name: "Seattle",
    geom: new Point(-122.3204, 47.6024)
], "city.1")

Function bufferFunction = new Function("buffer(geom, 10)")
Geometry polygon = bufferFunction.evaluate(feature)
```

*Evaluate a geometry Function*

```
Function lowerCaseFunction = new Function("strToLowerCase(name)")
String lowerCaseName = lowerCaseFunction.evaluate(feature)
println lowerCaseName
```

seattle

## Process Functions

Process Functions are a combination of Functions and Processes that can be used to create rendering transformations.

*Create a Function from a Process that converts geometries in a Layer into a convexhull.*

```
Workspace workspace = new GeoPackage('src/main/resources/data.gpkg')
Layer places = workspace.get("places")
Process process = new Process("convexhull",
    "Create a convexhull around the features",
    [features: geoscript.layer.Cursor],
    [result: geoscript.layer.Cursor],
    { inputs ->
        def geoms = new GeometryCollection(inputs.features.collect{ f -> f.geom})
        def output = new Layer()
        output.add([geoms.convexHull])
        [result: output]
    }
)
Function function = new Function(process, new Function("parameter", new Expression
("features")))
Symbolizer symbolizer = new Transform(function, Transform.RENDERING) + new Fill
("aqua", 0.75) + new Stroke("navy", 0.5)
places.style = symbolizer
```

Create a *ProcessFunction* from a *Process* that converts geometries in a *Layer* into a *bounds*.

```
Workspace workspace = new GeoPackage('src/main/resources/data.gpkg')
Layer places = workspace.get("places")
Process process = new Process("bounds",
    "Create a bounds around the features",
    [features: geoscript.layer.Cursor],
    [result: geoscript.layer.Cursor],
    { inputs ->
        def geoms = new GeometryCollection(inputs.features.collect{ f -> f.geom})
        def output = new Layer()
        output.add([geoms.bounds.geometry])
        [result: output]
    }
)
ProcessFunction processFunction = new ProcessFunction(process, new Function
("parameter", new Expression("features")))
Symbolizer symbolizer = new Transform(processFunction, Transform.RENDERING) + new
Fill("aqua", 0.75) + new Stroke("navy", 0.5)
places.style = symbolizer
```

## Creating Colors

*Create a Color from a RGB color string*

```
Color color = new Color("0,255,0")
```

*Create a Color from a CSS color name*

```
Color color = new Color("silver")
```

*Create a Color from a hexadecimal string*

```
Color color = new Color("#0000ff")
```

*Create a Color from a RGB List*

```
Color color = new Color([255,0,0])
```

### Create a Color from a RGB Map

```
Color color = new Color([r: 5, g: 35, b:45])
```

### Create a Color from a RGB function string

```
Color color = new Color("rgb(0,128,128)")
```

### Create a Color from a HLS Map

```
Color color = new Color([h: 0, s: 1.0, l: 0.5])
```

### Create a Color from a HSL function string

```
Color color = new Color("hsl(0,1,0.5)")
```

### Get a Random Color

```
Color color = Color.getRandom()
```

### Get a Random Pastel Color

```
Color color = Color.getRandomPastel()
```

### *Get a darker Color*

```
Color color = new Color("lightblue")
Color darkerColor = color.darker()
```

### *Get a brighter Color*

```
Color color = new Color("purple")
Color brighterColor = color.brighter()
```

## Getting Color Formats

### *Create a Color*

```
Color color = new Color("wheat")
```

### *Get Hex*

```
String hex = color.hex
println hex
```

```
#f5deb3
```

### *Get RGB*

```
List rgb = color.rgb
println rgb
```

```
[245, 222, 179]
```

### *Get HSL*

```
List hsl = color.hsl
println hsl
```

```
[0.10858585256755147, 0.7674419030001307, 0.8313725489999999]
```

*Get the java.awt.Color*

```
java.awt.Color awtColor = color.asColor()
println awtColor
```

```
java.awt.Color[r=245,g=222,b=179]
```

## Displaying Colors

*Draw a List of Colors to a BufferedImage*

```
Color color = new Color("pink")
BufferedImage image = Color.drawImage(
    [color.brighter(), color, color.darker()],
    "vertical",
    40
)
```

*Draw a List of Colors to a simple GUI*

```
List<Color> colors = Color.getPaletteColors("YlOrBr")
Color.draw(colors, "horizontal", 50)
```

## Using Color Palettes

*Get all color palettes*

```
List<String> allPalettes = Color.getPaletteNames("all")
allPalettes.each { String name ->
    println name
}
```

### *Get a Blue Green Color Palette*

```
List colors = Color.getPaletteColors("BuGn")
```

### *Get a Purple Color Palette with only four colors*

```
colors = Color.getPaletteColors("Purples", 4)
```

### *Get a Blue Green Color Palette*

```
colors = Color.getPaletteColors("MutedTerrain")
```

### *Get a Blue Green Color Palette*

```
colors = Color.getPaletteColors("BlueToYellowToRedHeatMap")
```

### *Create a Color palette by interpolating between two colors*

```
Color startColor = new Color("red")  
Color endColor = new Color("green")  
List<Color> colors = startColor.interpolate(endColor, 10)
```

### *Create a Color palette by interpolating between two colors*

```
Color startColor = new Color("wheat")  
Color endColor = new Color("lightblue")  
List<Color> colors = Color.interpolate(startColor, endColor, 8)
```

# Creating Expressions from CQL

*Create a literal number Expression from a CQL String*

```
Expression expression = Expression.fromCQL("12")
println expression
```

12

*Create a literal string Expression from a CQL String*

```
Expression expression = Expression.fromCQL("'Washington'")
println expression
```

Washington

*Create a Property from a CQL String*

```
Property property = Expression.fromCQL("NAME")
println property
```

NAME

*Create a Function from a CQL String*

```
Function function = Expression.fromCQL("centroid(the_geom)")
println function
```

centroid([the\_geom])

## Create Expression from static imports

*You can import short helper methods from the Expressions class.*

```
import static geoscript.filter.Expressions.*
```

*Create a literal*

```
Expression literal = expression(1.2)
```

### *Create a Color*

```
Expression color = color("wheat")
```

### *Create a Property*

```
Expression property = property("ID")
```

### *Create a Function*

```
Expression function = function("max(10,22)")
```
