Using STRtree Spatial Index

Create a STRtree spatial index

```
STRtree index = new STRtree()
```

Insert Geometries and their Bounds

```
index.insert(new Bounds(0,0,10,10), new Point(5,5))  
index.insert(new Bounds(2,2,6,6), new Point(4,4))  
index.insert(new Bounds(20,20,60,60), new Point(30,30))  
index.insert(new Bounds(22,22,44,44), new Point(32,32))
```

Get the size of the index

```
int size = index.size  
println size
```

```
4
```

Query the index

```
List results = index.query(new Bounds(1,1,5,5))  
results.each { Geometry geometry ->  
    println geometry  
}
```

```
POINT (4 4)  
POINT (5 5)
```
